

Subsea Coral Cutters

AT-0161

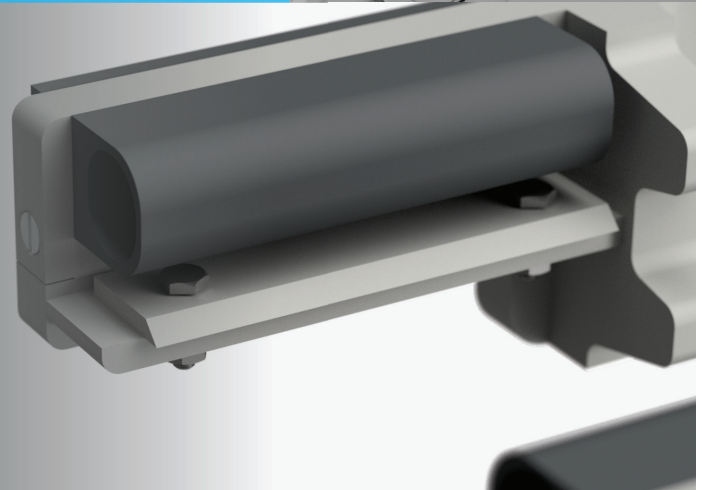

The Coral Cutter Attachment is a precision tool designed for integration with submersible or ROV manipulator grippers, enabling safe removal of coral branches.

Featuring a range of soft, flexible pads that gently secure coral structures and short cutting blades positioned beneath, the attachment allows careful, controlled sampling without damaging the specimens.

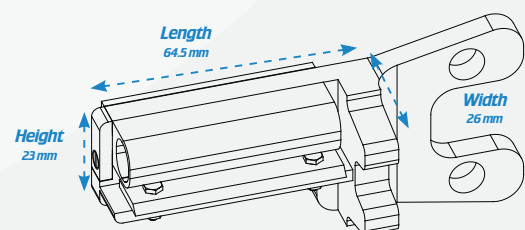

Key Features

- Soft pads for gentle, non-damaging coral handling
- Quick-change design for easy replacement of blades and soft pads
- Seamless integration with the parallel gripper jaws
- Compact form maintains manipulator versatility for other tasks

Specifications

Blade Length	50 mm
Blade Material	316 Stainless Steel
Soft Pad Material	Thermoplastic Polyurethane
Soft Pad Options	Soft Medium Hard

Note: Dimensions provided illustrate a single side of the Coral Cutter and its extension from the manipulator gripper
